

HAMILTON - FENTEC POOL FENCE

Sleek Aluminium Swimming Pool Fence - Hamilton, Waikato

The owners of this Hamilton home had specific requirements when they were searching for a pool fence. It needed to be contemporary; have flexibility in panel heights to work with their multi-level outdoor space; comfortably meet boundary consent requirements; and have a customisable option for one tricky panel.

Mansion fence panels from Fentec were chosen as they provided a flexible solution that ticked all these boxes. The homeowners were delighted that a matching, custom-made panel could be ordered – something no one else could supply. This meant no compromise on aesthetics as the custom panel fitted in seamlessly.

There were no challenges with stock supply or delivery, which resulted in a smooth installation. The fence panels were cut to size to suit the distance between each post, and were fitted using post caps and posts. The Mansion range is made from aluminium with a powder-coated finish. It is strong, durable, long-lasting, and suitable for home, and front fences too.

Crystal Clear Glass Swimming Pool Fence - Coromandel Peninsula

Incredible views often mean that a site is exposed to the elements, and this new build home in the Coromandel is no exception – it sits in an extra-high wind zone. The challenge for this fence installation was to find a product that could withstand high winds but didn't diminish the owner's enjoyment of those expansive ocean views.

It was a straightforward choice to use Scenik Frameless Glass Panels for this project. The panels chosen were 1200mm high and 12mm thick A-Grade toughened safety glass, rated to extra-high wind zones.

Rather than the standard two spigots (mini posts) per panel, three were used here. The homeowners opted for the Scenik Tekapo base mount spigots which securely connected each glass panel to the composite decking, providing peace of mind and excellent durability against the weather.

As well as coping with extra-high winds, fencing also needed to comply with the F9 building code clause for residential pools. Completed in late 2022, the total project (which included 52 metres of fencing) cost approximately \$30,000.

The Scenik Frameless Glass System wholly met the homeowner's expectations – more than satisfying safety and security requirements, without compromising on luxury living and their all-important uninterrupted views to the coast.

ABEL TASMAN - DECORATIVE FENCE

Decorative Screen Feature Fence - Abel Tasman

Abel Tasman Lodge is a unique property catering to all kinds of guests in search of nature and relaxation. Guests have complimentary use of the spa pool and the team at the Lodge wanted to find a way to create decorative privacy in keeping with the natural, rustic, and peaceful style of the Lodge environment.

The perfect solution was a SmartScreen by Strol. The Flax model featuring a Flax bush, and a Tui bird was chosen – a natural fit that mirrored the native bird life at the Lodge.

Installation was a breeze – the SmartScreen was set in a timber frame and attached to the gate with stainless-steel screws. Installed in late 2022, the brief was met with maximum impact and minimum spend – the Flax SmartScreen cost just \$109.

SmartScreens can be used for privacy, or to establish a new feature area. They are suitable for indoor and outdoor use, easy to install (DIY friendly), durable, long-lasting and a very quick way to create privacy.

Abel Tasman Lodge love the Flax SmartScreen so much they have asked for more.

“The rust steel SmartScreen perfectly fits with the style of the Lodge and beautifully showcases the local birdlife adding an element of interest to the landscape.”

AUCKLAND - DURAFENCE PVC

A Modern Composite Fence with Character - Auckland City

The owners of this 1920s bungalow wanted to replace their old rotten fence with a low-maintenance and high curb appeal option.

Having been inspired by other local properties, the homeowners opted to work with Durafence, a company that specialises in durable, long-lasting, and maintenance-free PVC fences.

The project required 50 metres of fencing, so two complementary panel styles were selected to soften the fence line. Metro - a simple style with full-height privacy was used for the main fencing, and Epsom - featuring a trellis top, was used for the gates.

Breaking out the concrete from the old wooden fence was a bit more challenging than expected, but otherwise, the project ran smoothly. The site was flat and easy to dig once the old concrete had been removed.

This project was completed in late 2022 and cost approximately \$13,000 which included a pedestrian and a double set of gates.

The finished result has given this classic bungalow the street appeal it deserves, and peace of mind to the homeowners who know they have invested in a quality, enduring, and low-maintenance fence.
